## Photoshop Action Installation for Homeworld 2

### 1 HW2 Photoshop Action Installation

The following are the steps for installing the Photoshop action that you need to turn your ship textures into a format that is suitable for the game.

We assume that Photoshop is installed in `C:\Program Files\Adobe\Photoshop 5.5` and the RDN package is stored in `C:\Homeworld2RDN`.

Replace them with the path to your Photoshop and RDN folders if necessary.

1. Copy all the files with `.8bf` extension from  
`C:\Homeworld2RDN\tools\Photoshop\RelicPlugins` to `C:\Program Files\Adobe\Photoshop 5.5\Plug-Ins\Filters`
2. Start Photoshop.
3. Go to the Actions window.
4. Clear Actions.... (if there are unnecessary actions in the Actions window).
5. Load Actions.
6. Select `Relic.atn` from `%HW2_ROOT%\tools\Photoshop\Actions` directory (where `%HW2_ROOT%` is where Homeworld 2 is installed).
